

## Description

Pizzato Elettrica is revolutionising the concept of safety handles, with the launch of the **P-KUBE Krome** series to the market.

These products combine the characteristics of a robust handle for safety enclosures, with an ergonomic, rounded grip and customisable functions for the customer, with various illuminated signalling options, to reflect the state of the guard, or other operating conditions the manufacturer wishes to indicate. The new handles also allow integration of a control device (e.g. a button), directly in the grip.

The P-KUBE Krome safety handles are a built-in and innovative solution for machine manufacturers who, with a single product and wiring harness, can optimise the cost of components, by eliminating peripheral control boxes and illuminated signalling columns, and implementing aesthetically pleasing and exclusive guards – without compromising on the quality and reliability offered by Pizzato products.

## Integrated control device

In the grip of the P-KUBE Krome handle, a spring-return button with 1NO contact can be integrated. This can be illuminated with a LED, and thus allows interaction with the machinery; for example to request guard opening, or transmit a reset command. The button is available in white, red, green, yellow, blue, and black.

## Robustness

The internal fixing plate is made of painted steel, and 5 mm thick, to ensure locking system robustness, and increased service life.

## Adaptability and flexibility

The same handle can be used on both hinged and sliding doors, with opening both on the right and on the left, simply by fixing the actuator on different levels.

## Protection against tampering

The P-KUBE Krome handle is supplied complete with snap-on protection caps to be applied to the holes of the fixing screws, so as to prevent access: therefore, standard screws can be used instead of tamper-proof screws, ensuring safety against deliberate tampering on the device. The caps also prevent the accumulation of soiling and facilitate the cleaning of the handle.

## Chrome-plated or illuminated grip

The grip is available with front strip in two finishes: satin chrome, and illuminated white. In the second version, the grip can be illuminated using RGB LED technology.

The modern, ergonomic design, combined with fully concealed fixing screws and wiring, allows implementation of machines and guards with particularly pleasing aesthetics.

### Available versions

Thanks to the wide range of configurations available, the P-KUBE Krome safety handle can be ordered in the version that best suits the user's needs. Customization options apply to the grip, which can be supplied with or without a control device, or with or without RGB LED lighting. This feature allows you to find the most suitable product for a specific application or to diversify the handles that are installed on the same system, depending on the needs of machine designers and installers.

- Without control device  
- Satin chrome grip not illuminated

- Without control device  
- White grip, can be illuminated with RGB LEDs

- With control device, can be illuminated  
- Satin chrome grip not illuminated

- With control device, can be illuminated  
- White grip, can be illuminated with RGB LEDs

### Customisable multicoloured illumination

The P-KUBE Krome handle, with illuminated grip, allows the machine manufacturer to locally signal the state of the guard by using various colours, and fully customisable sequences. Thanks to RGB LED technology, the handle illumination is visible from a large distance; even in brightly-lit environments. The device illuminates in colours: green, yellow, red, blue, white, purple, light blue.

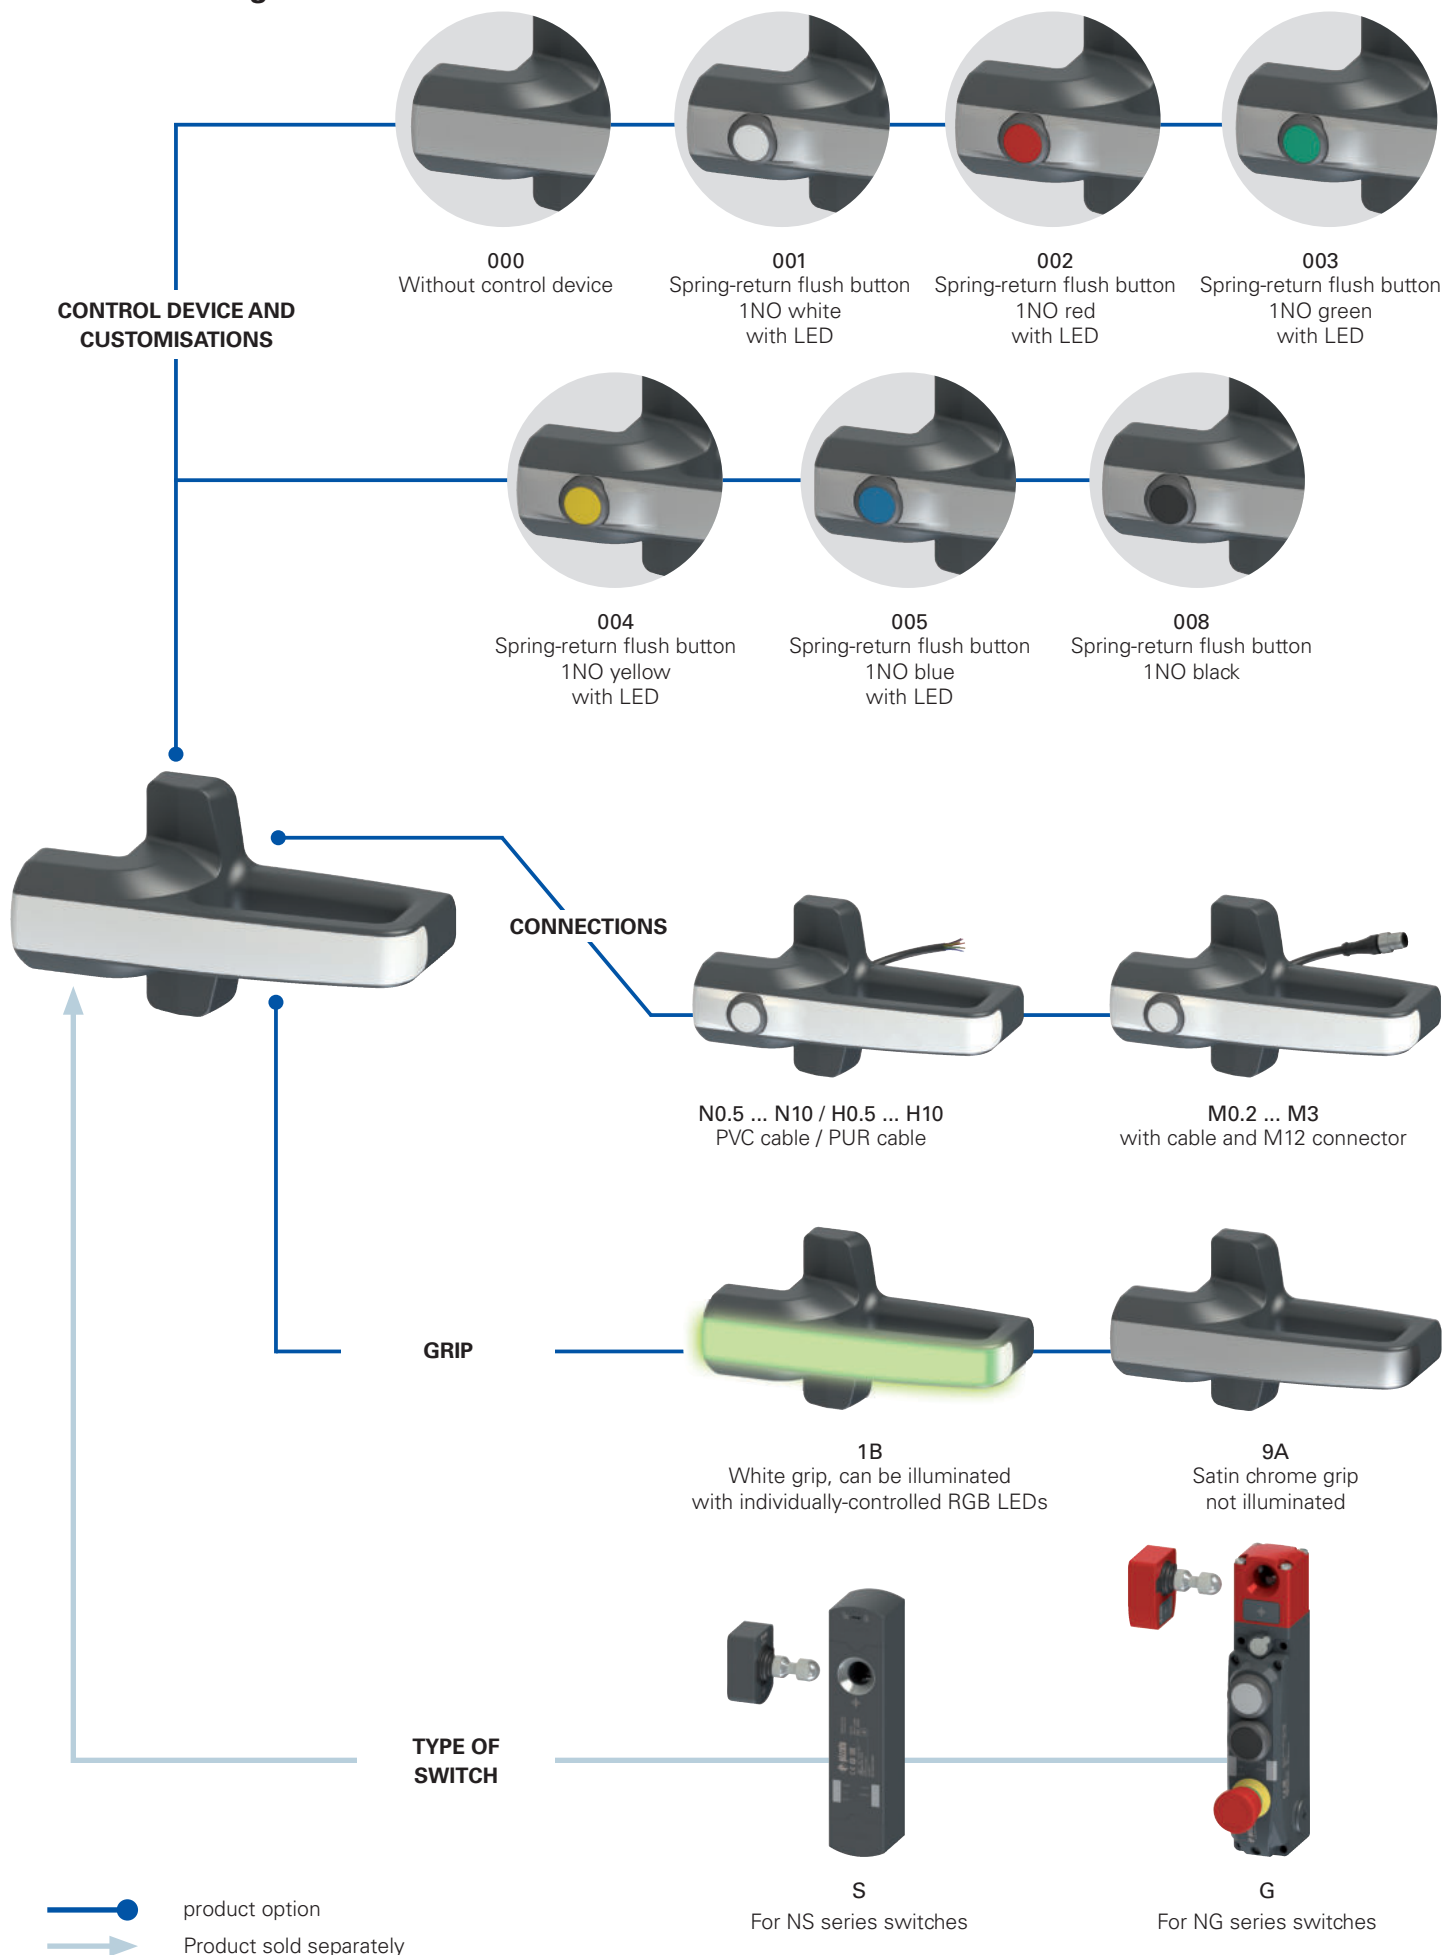

### Connections

The electrical connections are made through a cable that comes out at the back of the device and can therefore be easily housed inside the frame of the guard, so as to make it completely invisible. This feature has a double advantage: contributing to the aesthetics of the machine and ensuring the protection of the cable against damage and tampering.

The P-KUBE Krome handle is available with PVC cable connections or with cable and integrated M12 connector.

## Main features

- Modern and ergonomic design
- Versions with integrated RGB LEDs, for local signalling of guard state
- Customisable multicoloured illumination
- Illuminated control button integrated into grip
- Grip with different finishes
- Compatible with NG and NS series safety locking switches with RFID technology

## Quality marks:

UL approval: E131787  
EAC approval: RU C-IT.YT03.B.00035/19

## Features approved by UL

Environmental ratings:  
Type 4X, 12, 13 (models without control component).  
Type 1 (models with control component).

Electrical ratings:  
Main rating (LED supply): 24 Vdc Class 2, 75 mA.  
Secondary ratings (Contacts ratings control component):  
Silver contacts: 24 Vac Class 2, 1 A, Pilot Duty  
24 Vdc Class 2, 0.27 A, Pilot Duty  
Golden contacts: 24 Vdc Class 2, 100 mA

The models provided with M12 connector may be provided with the mating-connectors-part (with cord attached).

## Technical data

### Materials

Internal fixing plate in steel, oven-cured powder-coated.  
Glass fibre reinforced technopolymer grip, self-extinguishing and shock-proof.

### Electrical cables

Integrated mobile installation cable 8 x 0.25 mm<sup>2</sup> or 5 x 0.25 mm<sup>2</sup>.  
Versions with 3 m integrated cable, other lengths 0.5 to 10 m on request.  
Versions with 0.15 m cable length and M12 connector, other lengths 0.15 ... 3 m available on request.

### General data

Protection degree  
Versions with control device: IP65 acc. to EN 60529  
Versions without control device: IP67 acc. to EN 60529  
IP69K acc. to ISO 20653  
Ambient temperature: -20 ... +50°C  
Storage temperature: -40 ... +75°C  
Mission time: 20 years

### Power supply electrical data

Rated operating voltage  $U_e$ : 24 Vdc  $\pm$  15%  
Operating current at  $U_e$  voltage: 75 mA max  
External protection fuse: 1 A type Gg or equivalent device

### Electrical data of RGB LED control inputs

Rated operating voltage  $U_{e1}$ : 24 Vdc  
Operating current at  $U_{e1}$  voltage: 5 mA  
RGB LED life: min. 100,000 hours at rated voltage and +25 °C ambient temperature

### Technical data of the control devices

Mechanical endurance: 1 million operating cycles  
Actuating force: 4 N min, 100 N max  
Material of the contacts: silver contacts  
Contact type: Self-cleaning contacts with double interruption  
Thermal current  $I_{th2}$ : 1 A  
Rated insulation voltage  $U_{i2}$ : 32 Vac/dc  
Rated impulse withstand voltage  $U_{imp2}$ : 1.5 kV  
LED supply voltage: 24 Vdc  $\pm$  15%  
Single LED supply current: 10 mA  
Utilization category of the contact block: DC13;  $U_{e2}$ =24 Vdc,  $I_{e2}$ =0.55 A

### In compliance with standards:

For articles with integrated electrical parts:  
IEC 60947-5-1, EN 60947-5-1, IEC 60947-1, EN 60947-1, IEC 60529, EN 60529, EN IEC 63000, UL 508, CSA 22.2 N. 14.

### Compliance with the requirements of:

For articles with integrated electrical parts:  
Low Voltage Directive 2014/35/EU,  
EMC Directive 2014/30/EU.  
For all products:  
RoHS Directive 2011/65/EU.

## LK S lock out device for NS series switches

### Description

Article	Description
LK S1D001	Lock out device for NS series switches, mounting on the right side of the switch
LK S1S001	Lock out device for NS series switches, mounting on the left side of the switch

The range of P-KUBE Krome safety handles is completed by the lock out device for NS series switches with solenoid and RFID technology. The device has a full metal design and is attached laterally to the holes on the NS device, without any auxiliary fixing plate or support.

The front slider, in addition to mechanically closing the actuator entry hole, also functions as a shield for the RFID receiver antenna on the NS switch; thus ensuring an additional level of protection against accidental closure of the guard and untimely machine restart. This is particularly effective, for example, for machines with an installed low-level coded actuator, making any attempt to bypass the switch impossible.

When the slider is lifted, a  $\varnothing 7$  mm wide elongated eyelet emerges on the top of the device, allowing insertion of up to 5 padlocks.

### General data

### Error-proof operation

To prevent unintentional guard closure, simply move the red door upwards so that the actuator entry hole is fully covered, and the pin cannot be inserted.

Before entering the danger zone, each operator must insert his or her own personal padlock in the lock out slot. This means that the lock out device can be unlocked only once all padlocks have been removed; i.e., once all operators have exited the danger zone.

### Maximum adaptability and compatibility

The precise engineering of the LK S lock out device has enabled implementation of a highly versatile product, able to easily adapt to all potential configurations of guards on which an NS series switch is used.

The unique shape of the slider that seals the actuator hole allows the LK S lock out device to be used on both hinged and sliding guards, on both left and right.

The lock out and interlock switch are designed and manufactured for ideal compatibility with the new P-KUBE Krome handles by Pizzato Elettrica; allowing implementation of robust and functional protection systems, with an innovative aesthetic impact.

## AP G1Z-000Z lock out device for NG series switches

## Description

Article	Description
AP G1Z-000Z	Lock out device for NG series switches

Lock out device made entirely of metal to be installed with NG series switches with solenoid and RFID technology, compatible with the P KUBE 2 and P KUBE Krome series safety handles.

To prevent unintentional guard closure, simply move the black slider down so that the actuator entry hole is fully covered. When the slider is lowered, a plate with Ø 7 mm holes emerges on the top of the device, allowing insertion of up to 9 padlocks.

The slider also serves as a shield for the RFID receiver antenna on the NG switch.

## General data

The 7 mm diameter holes allow up to 9 padlocks to be used simultaneously.

Easy installation: installation with only 2 screws, suitable for guards with hinged or sliding opening, without having to change the direction of installation.

Made entirely of metal for ultimate durability.

Dual safety: mechanical closure and shielding of actuator RFID recognition function.

## Error-proof operation

With a single operation, the lock out device can close the centring hole in the NG switch as well as shield the RFID recognition system for detecting the actuator. Accidental closing of the guard is thereby prevented by inhibiting both the mechanical locking of the door and the electrical switching of the switch contacts.

### Maximum adaptability and compatibility

The symmetry of the AP G1Z-000Z lock out device allows it to be used in all possible configurations of guards on which a switch of the NG series is used, without any type of adaptation and any modification to the mounting position.

The unique shape of the slider that seals the actuator hole allows the AP G1Z-000Z lock out device to be used on both hinged and sliding guards, on both left and right.

The lock out and interlock switch are designed and manufactured for ideal compatibility with the new P-KUBE Krome handles by Pizzato Elettrica; allowing implementation of robust and functional protection systems, with an innovative aesthetic impact.
