Accessory

Recommendation (actuator) MZM 100-B1.1

Note

Note (General) Interlocks with the power to lock principle may only be used in special cases after a thorough evaluation of the accident risk, since the guarding device can immediately be opened on failure of the electrical power supply or when the main switch is opened.
As long as the actuating unit remains inserted in the solenoid interlock, the unlocked safety guard can be relocked. In this case, the safety outputs are re-enabled, so that the safety guard must not be opened.

NOTE_VOLT_OPERAT_AUX_DC stabilised PELV power supply
